

## ENVIRONMENTAL POLICY

We at Tsiakkas Winery are aware that business profitability depends on natural capital which is presently consumed at a rate far exceeding the natural replenishment.

We are therefore, committed to an environmental management system in order to make proper use of natural resources, while sustaining these resources for future generations.

For this we are committed to ensure the following:

- We ensure hygiene conditions throughout the entire spectrum of our business in order to achieve the best possible quality for our products.
- In order to combat climate change we ensure that energy is sustainably used in an attempt to minimize our CO<sub>2</sub> emissions.
- In order to combat desertification and preserve the scarce water resources on the island we ensure that water is efficiently managed during the entire cycle of our business.
- We ensure that our solid waste is managed in an attempt to reduce soil and water contamination.
- We are aware that our resource consumptions adversely affect biodiversity and for this we have set up an environmental management system to mitigate such impact.
- We are in continuous dialogue with the community, associates and personnel in order to ensure transparency and take into consideration their possible concerns. In this procedure we also ensure that our staff actively participates in the Environmental Management System.

Adhering to the above principles we are committed in setting up objectives and targets that are reviewed constantly in an attempt to improve our good environmental and social performance.

In addition, we take the necessary steps to prevent environmental degradation and ensure that all of our services are in compliance with the relevant legal requirements and those laid down by our business.
